

PDF Fonts Test Page

This text, which has no styles applied, is styled in the default font for the Visualforce PDF rendering engine.

The fonts available when rendering a page as a PDF are as follows. The first listed font-family value for each typeface is the recommended choice.

Font Name	Style font-family Value to Use (Synonyms)
Arial Unicode MS	Arial Unicode MS
Helvetica	sans-serif, SansSerif, Dialog
Times	serif, Times
Courier	monospace, Courier, Monospaced, DialogInput

Notes:

- These rules apply to server-side PDF rendering. You might see different results when viewing this page in a web browser.
- Text styled with any value besides those listed above receives the default font style, Times. This means that, ironically, while Helvetica's synonyms render as Helvetica, using "Helvetica" for the font-family style renders as Times. We recommend using "sans-serif".
- Arial Unicode MS is the only multibyte font available, providing support for the extended character sets of languages that don't use the Latin character set.
